NewTom and SICAT: a new alliance to take clinical imaging a step further

Excellent news for dental surgeons and radiologists in the North American market: SICAT software suite solutions are now available for use with the full range of NewTom digital imaging systems.

Open to all CBCT and digital impression systems, SICAT software is the perfect complement to NewTom devices. Both brands in their respective specialities have pioneered the most significant innovations in clinical 3D imaging and image processing. NewTom introduced CBCT technology into the dental sector and today has extended its range of sophisticated equipment to cover applications in the broader medical domain. SICAT is the world's leading developer of implant planning software which supports dental surgeons from diagnostics and planning in 3D to manufacturing of accurate SICAT surgical guides. Today, SICAT has over 21,000 users. Further software solutions cover needs relating to airway OSA airway evaluation and management, temporomandibular disorders and endodontic treatment. General Dentists as well as specialists using SICAT solutions benefit from educational support, optimized workflow, predictable outcomes and increased acceptance and referrals. Software training and support is included and provided by SICAT's US based 3D Specialists.

NewTom 3D CBCT imaging systems together with SICAT software are now the ultimate in terms of performance and clinical excellence related to diagnostic imaging. NewTom is renowned for its unrivalled image quality and ground-breaking technologies to minimize radiation, thereby safeguarding patient health. Today's partnership is an opportunity to acquire greater market share together, also thanks to the widespread distribution network guaranteed by Patterson, who has worked with both brands for a number of years.

National Sales Director at Cefla North America, Dan Konicek, commented: "This product pairing represents a huge opportunity, not only for our two companies who will certainly benefit from one another's experience and specific expertise, but also for the entire North American market in which dental professionals and radiologists now have access to the best combination of diagnostic imaging and dental software suite solutions."

"Today's dental consumer deserves the best possible treatment options. The availability through Patterson Dental* of this product pairing allows today's dentists to provide their patients with an ideal experience. The package further equips the dentist with an optimized chairside workflow that produces precise outcomes. The dentist's success is accomplished through best-in-class clinical support. We are thrilled with this working relationship between the Cefla North America and SICAT" states Craig Hennings, President of SICAT-US.

As of today, dental surgeons are welcome to seek out the unmatched benefits of this top-class, integrated solution to their clinical imaging needs.

*Both systems are distributed separately in the United States through Patterson Dental
